

## Ventilation Technology

# Ventilation channel with pollen protection

Ventilation channel with cold, noise and pollen protection!

Fresh air inside of buildings is necessary – for our health and to protect the structure of the building. The new ventilation channel with pollen protection is built in like a wall duct, but has many further benefits:

The integrated pollen protection allows allergy sufferers to breathe. A special inner foam cladding insulates exterior noise and prevents condensation.

The innovative seal mechanism prevents cold air from entering: air is locked in and keeps the heat inside.

The ventilation channel with pollen protection has a telescopic channel for wall thicknesses up to 580 mm – which is also sufficient for walls retrofitted with insulation.

**The Marley ventilation channel with pollen protection – improves your health, saves energy and protects your nerves!**

**Do it with Marley.**

good reasons  
for more  
fresh air!

# Allergy Sufferers Breathe!

The Marley ventilation channel with pollen protection – the wall duct that has many further benefits:

Heat insulation thanks to enclosed air volume (x)

## 1. Premium design ventilation

- Wall duct for fresh air intake
- Slim, elegant cover – suits any situation (matches the Marley Silenzio ventilators)

## 2. New insulation seal

- Freely adjustable seal
- With closed intake cover: heat insulation thanks to hermetically sealed air volume!

## 3. Pollen protection

- Filter insert easy to change - allergy sufferers can breathe!

## 4. Noise and building protection

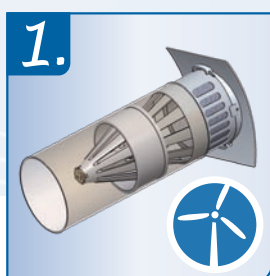

- Integrated foam inner cladding insulates exterior noise and prevents condensation build-up

### Simple installation – fool-proof:

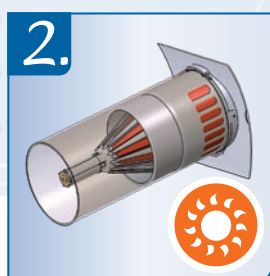

- No installation frame – one coring is sufficient
- Telescopic channel for wall thicknesses of 250-580 mm
- Pipe external diameter 108 mm
- Inside cover 150 x 150 mm
- Outside grille 140 x 140 mm, with fly gauze
- Inside cover can be adjusted by  $\pm 10^\circ$  to align non-flush fitting

Designer cover

1. Fresh air through walls up to 58 cm.

2. Hermetic seal – seals hollow space as heat insulation.

3. Changeable pollen filter.

4. Integrated noise insulation – foam condensation protection!
